Welcome

enrich IT is pleased to introduce our first edition of Business Transformation, a newsletter designed to educate and enhance technology in business. enrich IT's mission is to provide our customers the best in class strategic IT business solutions for their unique business needs, resulting in clear business transformation.

Our consultants have over 1000 years of combined Oracle experience. We are passionate about Oracle and passionate about helping you accelerate your own business through smart technology solutions that make sense for your business. Welcome to Business Transformation December 2009.

In the News

enrich IT has now partnered with Dun & Bradstreet. This strategic partnership will provide more value to our customer's procurement solution by maximizing the ability to manage spend and supplier relationships more effectively.

enrich IT is developing dashboards for Supplier Risk Management in our Procurement BPO Oracle EBS instance using D&B proprietary risk management information. D&B is the world's leading source of commercial information and insight on businesses, enabling companies to Decide with Confidence® for 167 years. D&B's global commercial database contains more than 140 million business records. The database is enhanced by D&B's proprietary DUNSRight® Quality Process, which provides customers with quality business information. This quality information is the foundation of our global solutions that customers rely on to make critical business decisions.

By partnering with D&B, enrich IT is able to use the solid resources and information in their database to build an exceptional platform that will allow customers to make critical business decisions as it relates to procurement.

The dashboards developed for Supplier Risk Management through Procurement BPO Oracle EBS instance using D&B proprietary risk management information will help organizations in making Supply Management decisions. This helpful information will translate directly into instrumental value and savings for the entire organization's value chain process. This is achieved by fast track data visualization of file analysis with corporate linkage among business units in line with category management and diversity management. enrich IT provides a very flexible commodity / category taxonomy (commodity classification).

The enrich IT dashboards are specifically developed so that the supplier records are matched for various parameters. These parameters are able to give details of duplicates, regions and also unmatched spend breakout among others. The dashboards give management the tools they need by providing specific details of areas to strategically focus on enabling performance improvement within the value chain.

enrich IT provides transformation methodology by providing best in class practices within the industry without compromising on operations excellence. This is achieved through flexible and scalable delivery options, which include standardization and process re-engineering, change management with maximum utilization of resources & utilities, and reduced cycle times. By using the enrich IT dashboards, companies are able to make innovative process improvements, maximize regular process mining combined with strict governance models to mitigate operational and financial risk. All of this strengthened with 6 sigma methods will create sustainable and consistent performance producing increased service levels and accelerated business transformation.
